

Innovative Switchgear Solutions Inc.

Since their humble beginnings in 2012, Innovative Switchgear Solutions Inc. (ISG) has revolutionized the switchgear industry. They are entrepreneurial pioneers and shining example of Northern Colorado's economic success. Switchgear devices are designed to regulate electrical currents and protect power systems from overloading. Without a switchgear to control the energy, electrical transformers are susceptible to burn outs. Conventional manufacturers produce units filled with oil and SF6 gas used for insulation and fire protection. But as Dan Blackburn and Roger Schafer grew increasingly aware of unmet safety and reliability concerns associated with conventional switchgear equipment, they realized it was time for a change in the industry. Initially working out of their basement, Blackburn and Schafer combined nearly 60 years of engineering experience and created Innovative Switchgear Solutions.

The company is headquartered in Dacono, Colorado and has grown from four to twenty-six employees in just six years. ISG considers customer safety to be their highest priority. Today, Innovative Switchgear is successfully designing and selling switchgear that are unlike any other in the market. Their products are compact, maintenance-free, and safely sealed in stainless steel tanks. Most importantly, these switchgears don't require the use of dangerous oil or SF6 gas. Most of their designs are custom engineered to solve systematic problems and protect transformers. ISG takes pride in the ethical way they interact with vendors, customers, and the environment.

Innovative Switchgear's management team includes founders Dan Blackburn and Roger Schafer, CEO Bobby Kocol, and President and General Counsel Lisa Blackburn. Together, this dynamic team seeks to better understand customer challenges and provide a reliable, safe, and high quality product.
